

# Redline – Newcastle Core Zoning Code

v0.15-draft → v0.16-draft · changed passages only

**How to read this redline.** Struck-through text was removed; red text was added immediately after it. Only the TEXT of the Code is compared – natively rendered layout (district spreads, Type plates, district maps) and images are not shown here.

1 changed passage(s) shown below, each under its Section location. Unchanged text is omitted.

## Article 3 Thoroughfares › 5. CLASSIFICATION OF EXISTING THOROUGHFARES › d. CLASSIFICATION RUBRIC

b. **\*\*Built character test.\*\*** Where the abutting built form indicates a character at variance with the Adjacent District test – for example, a segment within D2 whose abutting parcels are uniformly rural in character – the Type is adjusted to match the built character.

c. **\*\*Right-of-way and cartway test.\*\*** Where the existing right-of-way and cartway widths preclude one Type but are consistent with another, the Type is set to the closest match permitted by physical constraints, and the segment is recorded as nonconforming under Section 14.

d. **\*\*MaineDOT functional class test.\*\*** ~~~~A~~`#text(fill: rgb("#cc0000"))[In Districts whose default Type under Table 3.4 is a Road Type – D1, SD-Conservation, SD-Highway Commercial, and SD-Rural Highway – a]`{=typst}~~ segment carrying a MaineDOT functional classification of Principal Arterial or Minor Arterial is presumed to be R4 (Highway Commercial) or R5 (Rural Highway) ~~~~depending~~`#text(fill: rgb("#cc0000"))[according]`{=typst}~~ ~~~~on~~`#text(fill: rgb("#cc0000"))[to]`{=typst}~~ its abutting ~~~~District.~~`#text(fill: rgb("#cc0000"))[District,]`{=typst}~~ ~~~~A~~`#text(fill: rgb("#cc0000"))[and a]`{=typst}~~ Collector classification is presumed to be R1 (Connector Road). ~~~~A~~`#text(fill: rgb("#cc0000"))[In]`{=typst}~~ ~~~~Local~~`#text(fill: rgb("#cc0000"))[all]`{=typst}~~ ~~~~classification~~`#text(fill: rgb("#cc0000"))[other]`{=typst}~~ ~~~~is presumed to follow~~`#text(fill: rgb("#cc0000"))[Districts]`{=typst}~~ the Adjacent District ~~~~test.~~`#text(fill: rgb("#cc0000"))[test (test a) governs regardless of functional classification: a State Highway or other MaineDOT-classified segment passing through a village or neighborhood District takes that District's targeted Type – so a Main Street that is a State Highway is classified S1 – and its cartway geometry is reconciled with State control through the Section 12 MaineDOT coordination protocol rather than by reclassifying the segment to a Road Type. A Local classification follows the Adjacent District test in every District.]`{=typst}~~

e. **\*\*Tie-breaker.\*\*** Where the above tests produce conflicting indications, the Planning Board determines the Type after a public hearing, considering the long-term character intent of the abutting District(s).
